

Caribbean Boulevard

Bridge Replacement

Second Community Involvement Meeting

Project No. 20080029

9/12/2012

Community Meeting

JACOBS

Project Overview

Existing Conditions

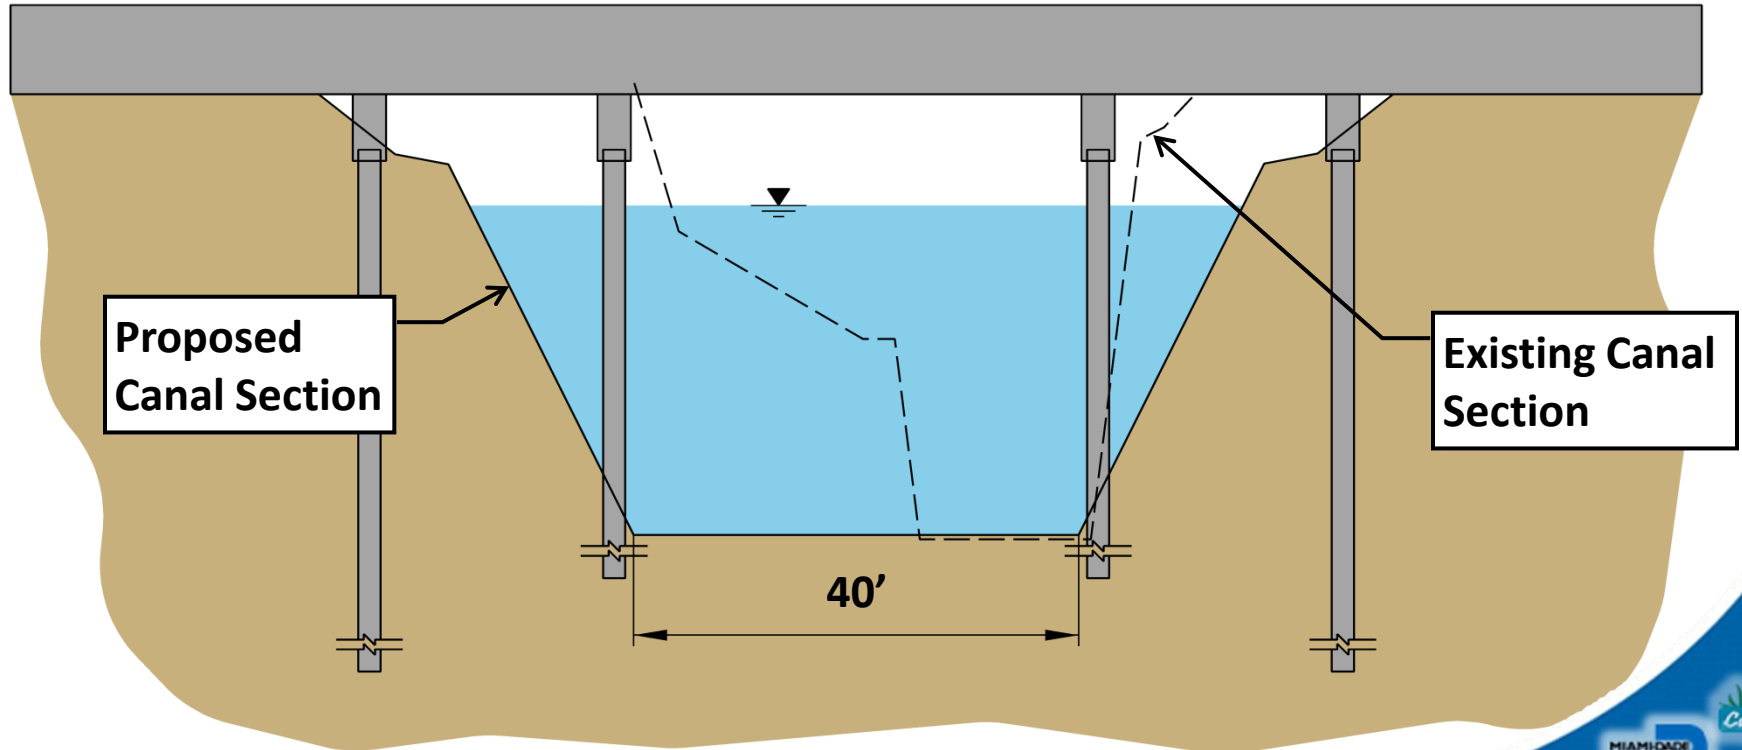

Why is the Project Needed?

- The existing bridge currently restricts the flow of the canal.
- A longer/wider bridge would allow for the future dredging of the canal.

Why is the Project Needed?

- Alleviates flooding in the surrounding residential areas.
- Project is critical to the South Florida Water Management District canal system.

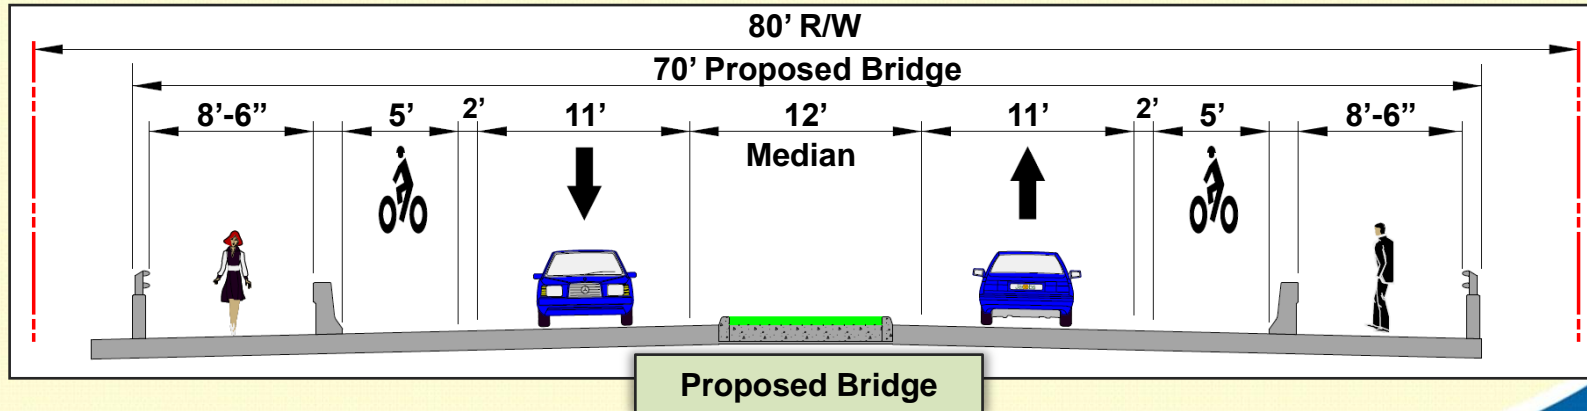

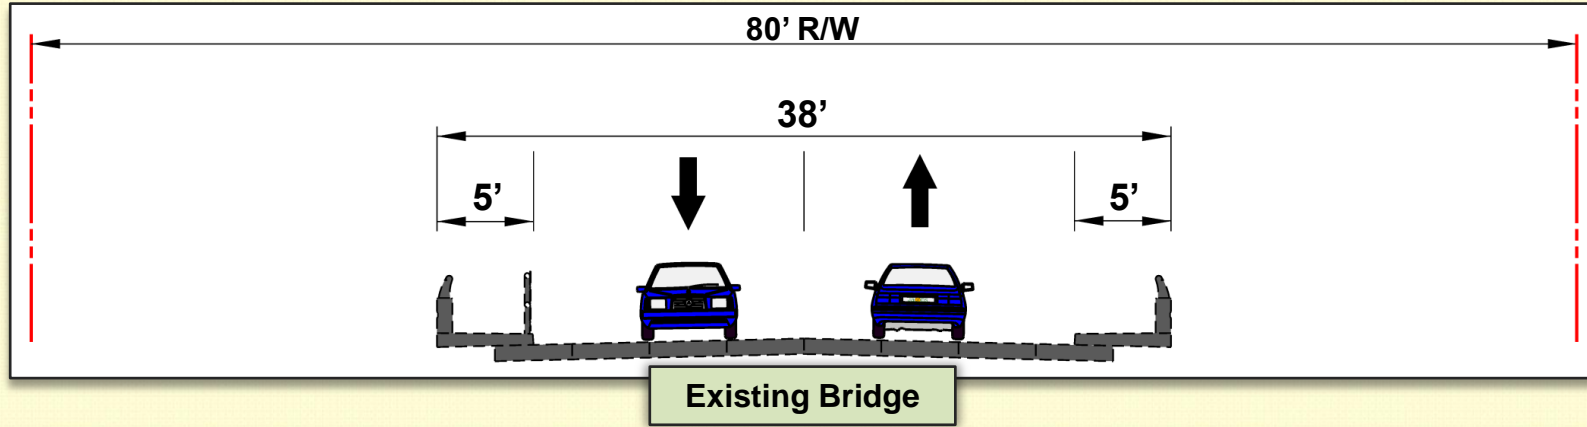

Proposed Canal Improvements

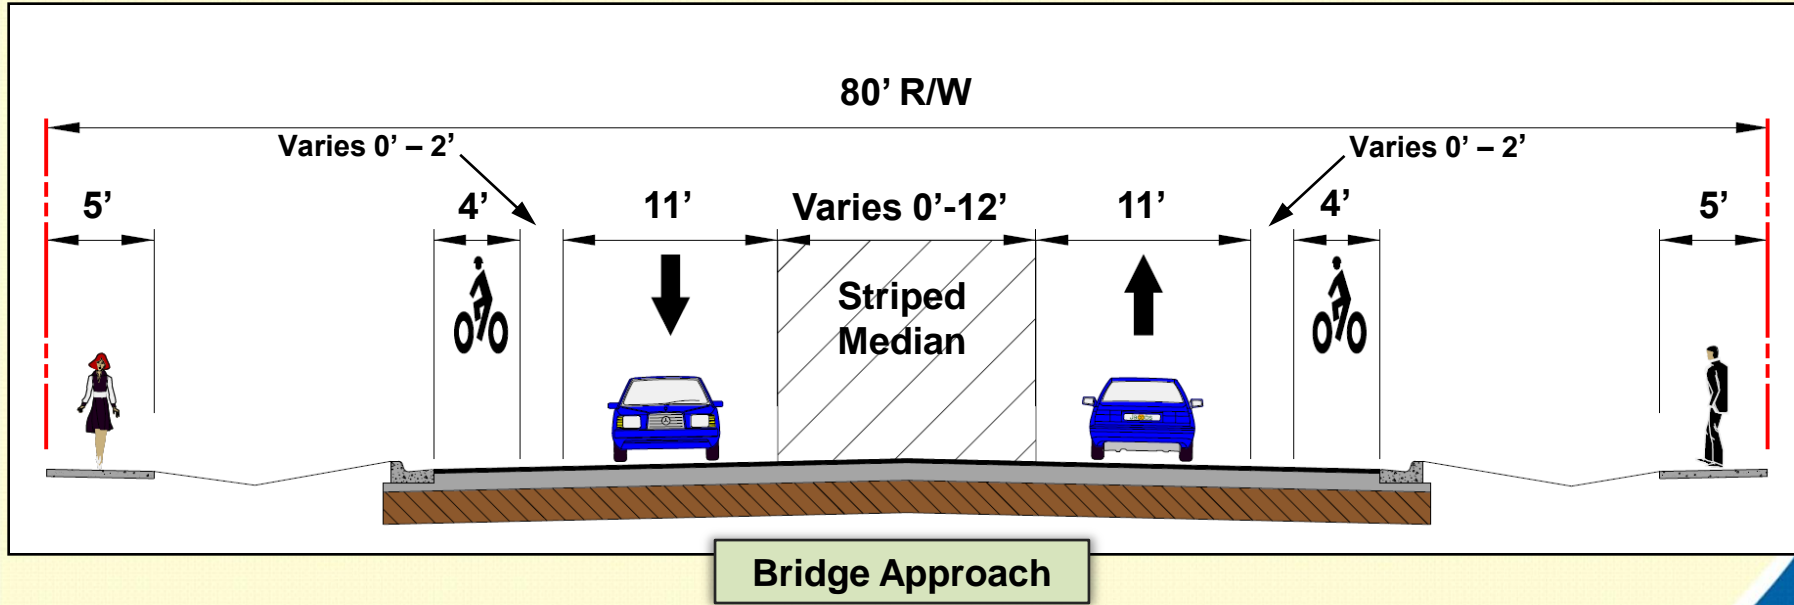

Why is a Wider Bridge Proposed?

- Allows for 2 lanes of traffic to be maintained at all times during construction phase.
- Improves the “safety” of the bridge with the addition of a median, wider sidewalks, and bicycle lanes.

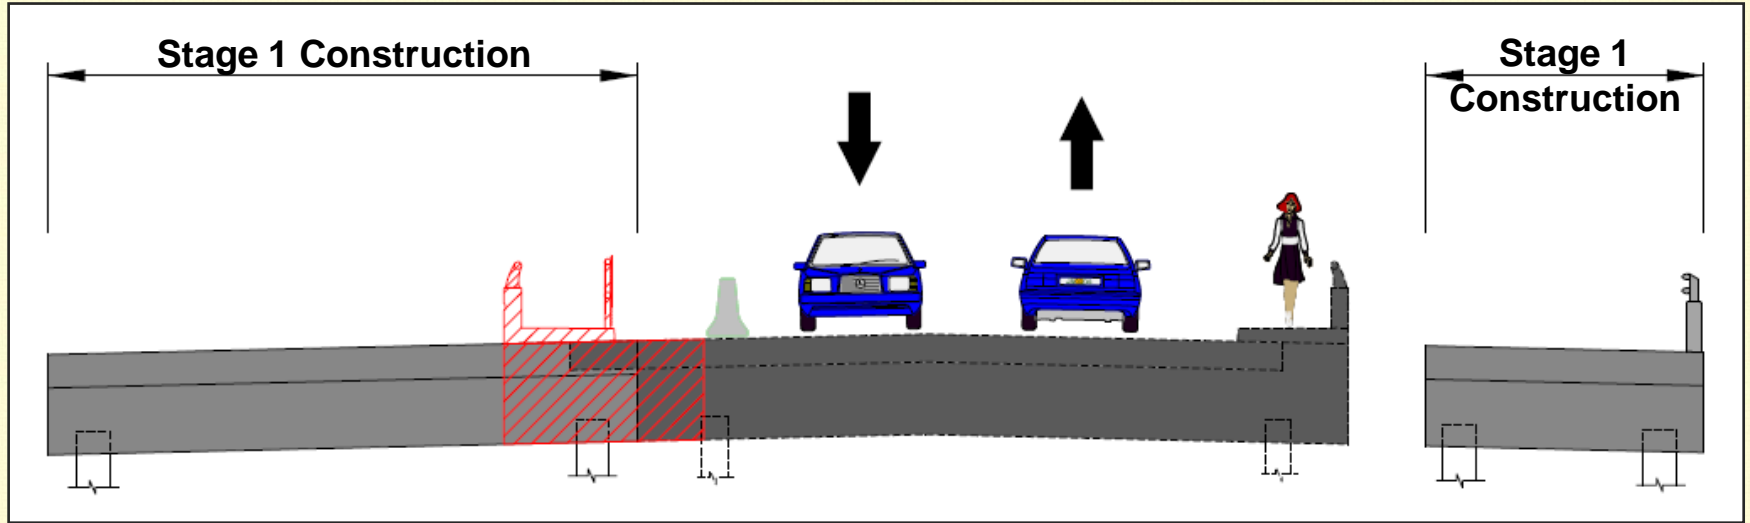

Bridge Typical Section

Roadway Typical Section

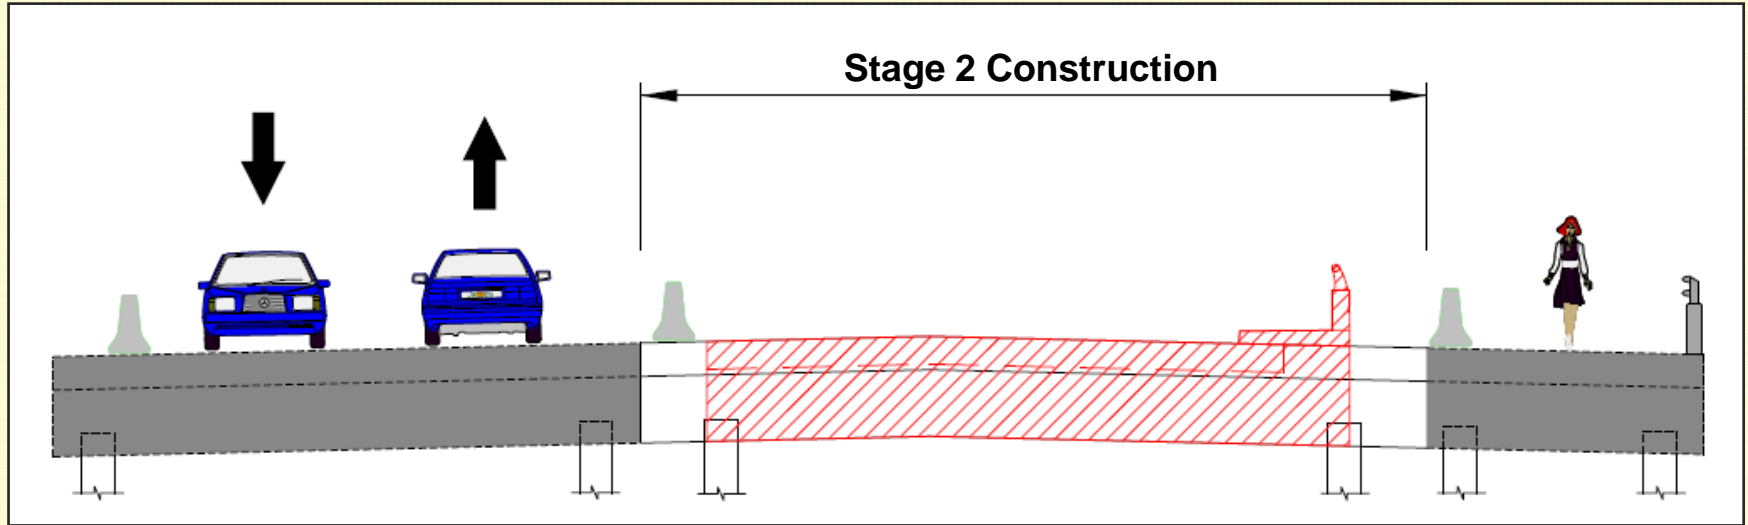

Stage 1 Bridge Construction

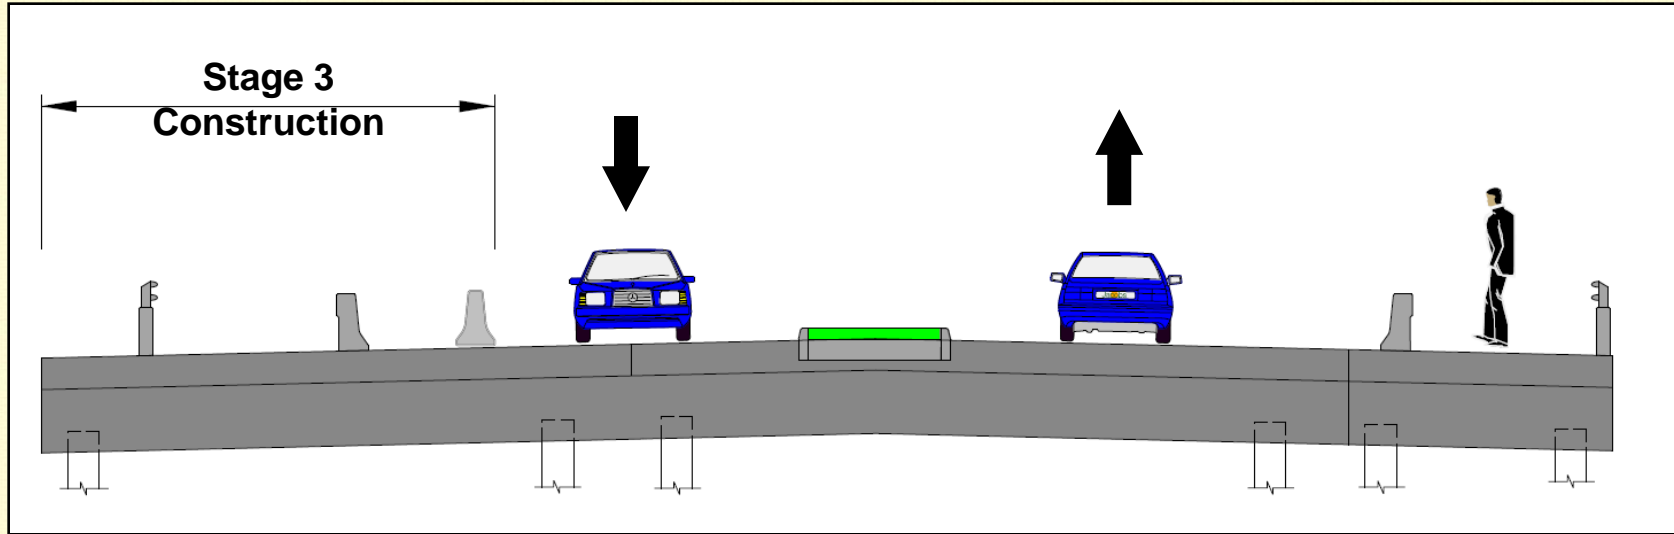

Two lanes of traffic maintained during construction at all times.

Stage 2 Bridge Construction

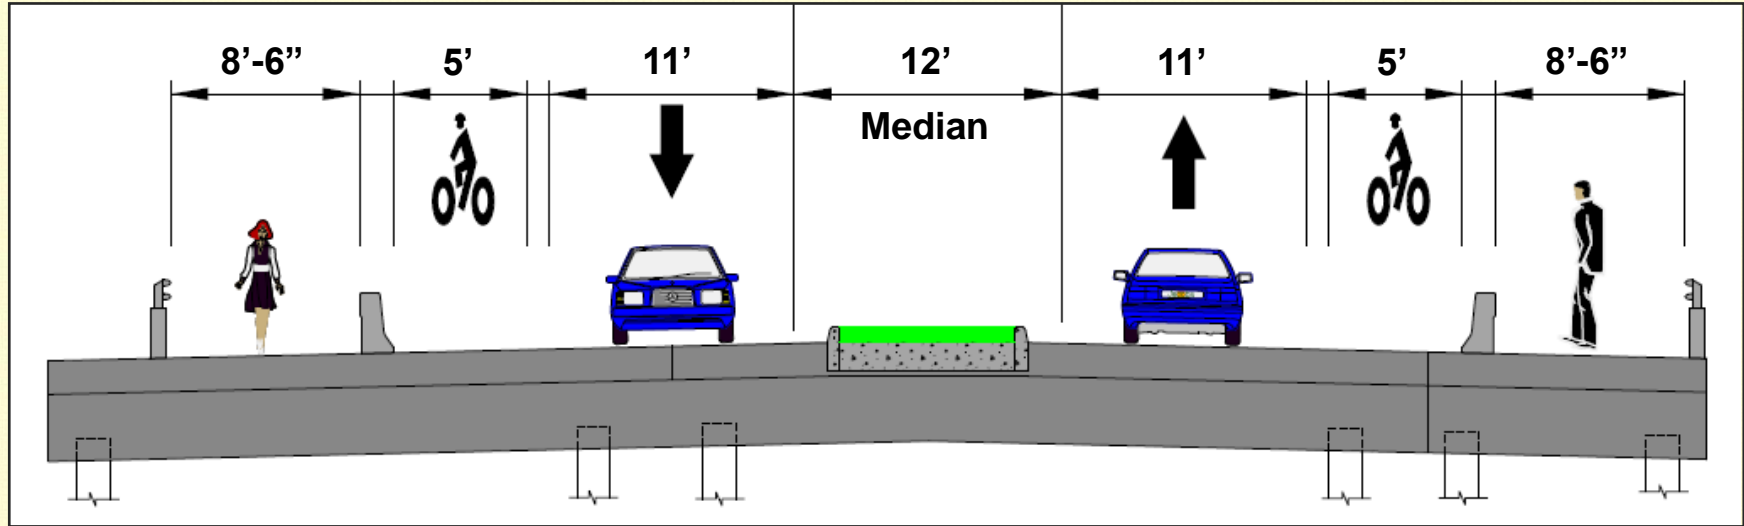

Two lanes of traffic maintained during construction at all times.

Stage 3 Bridge Construction

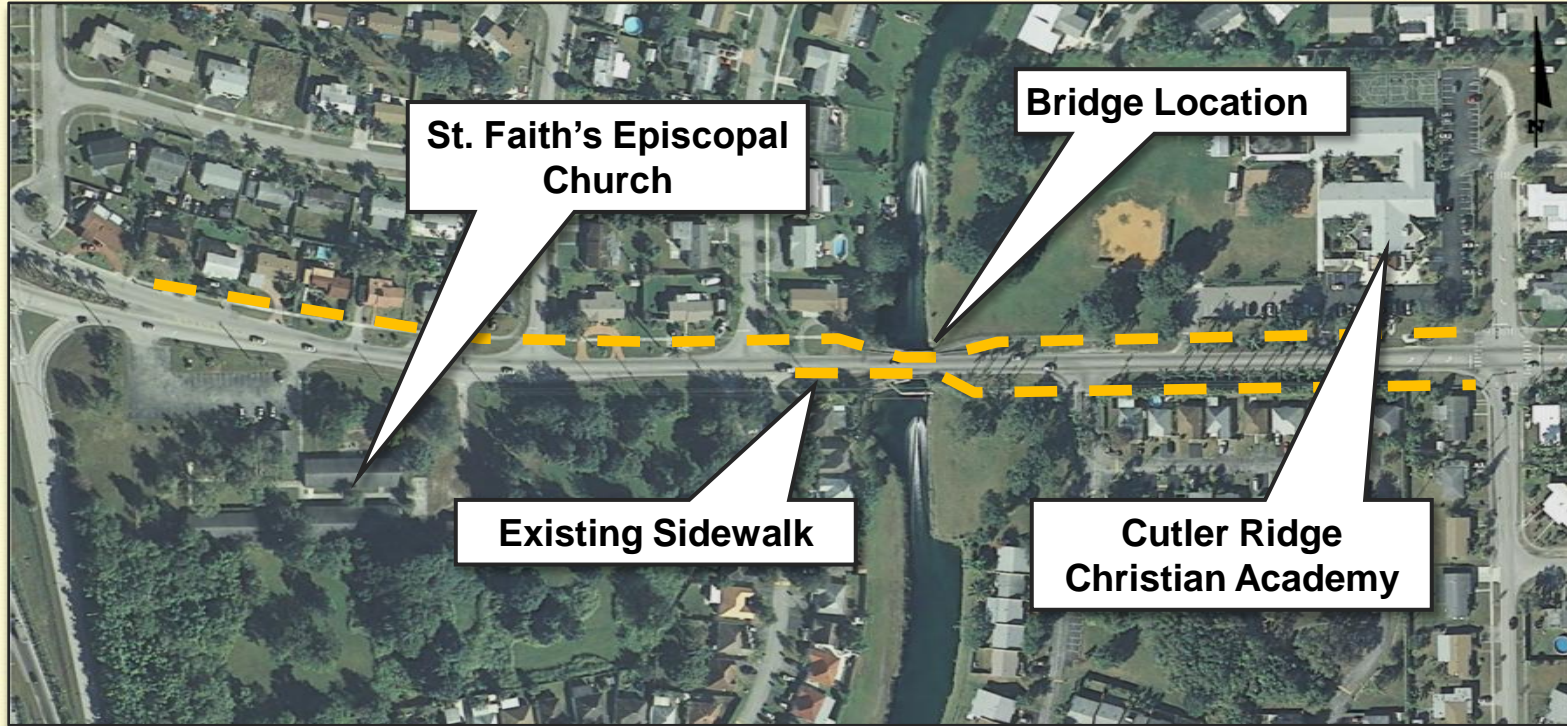

All utility services will be maintained during construction.

Final Bridge Configuration

All utility services will be maintained during construction.

Pedestrian Accessibility

Sidewalk on one side of the bridge will be maintained at all times during construction.

Project Schedule

- Tentative construction start date:
September 2013
- Tentative duration of construction:
1 year
September 2014
